The total area surveyed was 10.3 km² out of a possible 10.8 km² (95%). The maximum depth recorded was 78.6 m (from a lake level of 309.3 masl). The data density supports a 1 m grid of the bathymetry (as shown).

Acknowledgements
GNS Science wishes to acknowledge the iwi, hapū and whānau who are the mana whenua that connect with, and uphold, the mana wai of Lake Ōkataina. We also acknowledge the Te Arawa Lakes Trust for providing access to the lake and for their support to do this research. A combined team from the University of Waikato (D.K.H. Immenga) and Discovery Marine Limited (D. Stubbing and J. Van der Pauw) surveyed the lake for its bathymetry under the guidance of Prof. D.P. Hamilton of the University of Waikato, and are acknowledged for their leadership in the survey. D.K.H. Immenga of the University of Waikato provided expert boatmanship and safe working conditions during the subsequent magnetic, gravity and heat flow surveys. Funding for this project was by way of the Strategic Science Investment Fund (SSIF).
