Site & Access Details

Access and Location Description

Location south of Mt Forbes. The site is located on a broad flat plateau below the S ridge to Mt Forbes. There is a very large area of relatively flat terrain for helicopter landing. From S fly along the break in slope above Macaulay River. Near the Nth end look for a large area of reddish rock. At the S end of this area is a large pile of boulders. Slightly to the north of the boulders there are two knolls of reddish rock separated by a valley of grey rock. Within the valley find a large outcrop of bedrock which protrudes 0.5m or more above the valley floor and is 10-20m long. The upper part of the valley is grey while the lower part which contains the pin is red. The point is marked by Cairn and dazzele.

For each block of downloaded files there will be an earliest and latest file downloaded, plus the total number of files downloaded. Typically there will only be one download block per occupation. Occasionally a receiver will be downloaded several times during an occupation (eg during an extended semi-cGPS occupation). In this instance there will be multiple earliest, latest, and number of files downloaded. These are summarised in the comma delimited lists above.
